Mr. P. A. Chapdelaine, Sr.
Rte 4, Box 137
Franklin, TN 37064

Dear Perry,

In accordance with our telephone conversation yesterday, I am sending the following negatives and a few electron micrographs I had made in duplicates:

- 1) 18 frames of 35-mm negatives, showing the phase-contrast images of cells at different stages of multiplication, forming tissue-like structures.
- 2) 9 electron microscopic negatives

Nos. 1,8; isolated cells growing at the edge

Nos. 3, 4, 22; side view of piled-up cells, showing different stages of fiber-like material filling intercellular spaces.

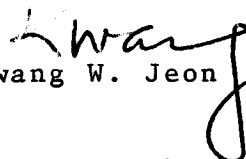

No. 13; collagen-like fibers surrounding a macrophage-like cell.

No. 14; fibers filling space between cells.

Nos. 16,17; fibers at higher magnifications.

With best wishes,

Yours sincerely,

Kwang W. Jeon

P.S. I will try and write to you soon about the questions we might ask, within a couple of weeks. Thanks.
